

**This roof rail weatherstrip set has been carefully made, trimmed and packaged into a set. Please immediately check it over for completeness.**

**The roof rail weatherstrip set consists of eight pieces as follows:**

- A) two corner fillers, front, right and left for top of windshield posts.
- B) two pieces of extruded rubber molding, approximately 24" long, for side roof rail front section over doors. The cross section of these strips should look like this:

- C) two molded pieces of weatherstrip, right and left hand, approximately 19" long for the center section over the quarter window. The side view of these pieces should look like this:

- D) two pieces of extruded rubber approximately 15-1/2" long, similar to (B) above, except shorter, for the rear side section on the folding post. These two pieces will have sloping ends, required to fit properly.

All of these strips should easily fit the metal weatherstrip retainer on your car, but if you do not apply the cloth covering before installing them (some owners do not want the cloth covering), some of them may fit rather loosely.

To determine right or left hand applications, usually a comparison with the old weatherstrip will tell you which side is which.

For those desiring the cloth covering, our 70-1172-65 should be used, as it is the original cotton bowdrill material to which we have applied a high quality double sided adhesive making it easy to apply.
